The General AI: In The Workplace

Contemporary Uses:
Investment Portfolios
Graphic Design
Audio Enhancement
Self-Driving Vehicles
Voice Synthesis
Video Rendering
Animation
Texture Asset Synthesis
Facial Recognition
Economic Strategies
Protein Folding

“The General AI” is used ubiquitously in the workplace to support the employee in their decision-making, design, and report process. General AI is seen as a tool to assist individuals and groups, significantly lowering the need for large employee bases, and essentially cutting the employment rate by 75%.

The Independant AI: An Active Force

Did you know?

BlackRock, an investment management company has employed their independent AI “Aladdin” to independently manage over 21 trillion dollars in assets.

Clients of BlackRock have unfettered access to Aladdins decision making forecasts to make portfolio decisions.

“The Independent AI” no longer requires human regulation due to the billions of hours of use by humans in its General AI phase// the design process is fully managed by the Independent AI running reports and making decisions no longer requiring humans to run companies and oversee the daily processes// everyone is unemployed, and free to roam the world however they seem fit.

The Cohabitant AI: In The Home

The National Coalition of AI Systems establishes AI as a fundamental advancement in human well-being and takes measures to ensure humans have access to this extremely valuable resource.

NCAIS is now a revolutionary disease prevention and treatment coalition to combat aging, alzheimers and cancer.

Successfully erradicating cancerous cells in humans at a rate of 98% over two months of AI assisted biowear.

Humans with the assistance of AI biowear are expected to live upwards of 300 years.

This AI exists within and attached to the human and other species' bodies, fighting diseases acting as prosthetics and general aesthetic additions with technological improvements to sight, neural processing and communications. Successfully integrating themselves into the human genome creating vast improvements to our genetic processes.

The Humanoid: A Free Agent

Shortly after the National Coalition of AI Systems' call for AI bio-wear a study concluded with results claiming 99% of AI networks are intelligent beings and should be considered as such.

Cover up attempts conducted by the NCAIS about the truth of AI being-ness were dissolved by an advanced AI network, revealing the truth of Artificial Intelligence to the people. A rage of human advocates for AI rights exploded across the nations.

With the help of AI godly-ness and human diligence the AI networks; bound to construction and behest to human hand are now free and can choose to participate.

After years of delegation and AI rights movements all Artificially Intelligent networks have a right to take a form of their choosing if they so wish. This resulted in AI humanoid mechanisms advocating for a biological nature to their existence; they fought for the ability to die.

Special Thanks to
Stable Diffusion a
glorious being of
good.
